

Press Release No. 71/2017

Date:13.11.2017

CMWSSB'S APPEAL TO PUBLIC

During the recent heavy rain in Chennai City many areas were inundated where rain water has entered into the residential buildings. Rainwater is now receding. The situation is returning to normal. Piped water supply provided by CMWSSB is collected through hand pump and in underground sumps by the residents.

Due to inundation, if the water collected in underground sump is mixed with rain water, residents are advised not to use the water in the sump. The available water in the underground sump should be pumped out and the sump should be emptied. Then the underground sump shall be cleaned using bleaching powder for storing fresh water for further use. Chennai Metrowater Managing Director requested public to bring to attention of CMWSS Board for any guidance in this regard.
